INTRODUCTION

This study evaluated physician knowledge, attitudes, and practices (KAP) regarding lung cancer screening in Tunisia.

METHODS

Design:

A cross-sectional study was conducted using an expert-validated KAP questionnaire. The survey was distributed online to Tunisian physicians across multiple specialties.

DISCUSSION AND CONCLUSION

Actionable Take Away Message

- Critical gaps persist in guideline familiarity, counseling confidence, and referral practice.

Future Direction for Research

- Establishing a national screening program, supported by standardized physician training and patient education campaigns, is essential to translating awareness into action and improving early detection outcomes in high-risk populations.
